

# System Design for E-Commerce Ratings Platform:

Ratings Table:-

| Product Id | User Id | User Info-1 | User Info-2 | Rating | Timestamp |
|------------|---------|-------------|-------------|--------|-----------|
|            |         |             |             |        |           |
|            |         |             |             |        |           |

<ProductId, UserId> = UNIQUE constraint / PRIMARY KEY

ProductId -> Indexing for optimized retrieval

UserId -> Foreign Key with User Details Table
